

1	Learn How to Code: The Complete Core Java Programming Course	2
S No	Table of Contents	S No
1	Basic Concepts of Java Programming	1
	Introduction	
	Java Development Kit (JDK) Installation	
	Eclipse Installation	
	Writing Your First Java Program	
	Primitive Data Types in Java	2
	Arithmetic Operators in Java	
	Logical and Bitwise Operators	
	Relational Operators in Java	
	If - Condition	
	Nested If - Condition	3
	"For" Loop in Java	
	Hands-on Exercise on the "For" Loop	
	"Nested For" Loop	
	Hands-on Exercise on the "Nested For" Loop	
	"While" and "Do While" Loop in Java	4
	Loop "Break" and "Continue" Statements	
2	String Operations	
	String Basics	
	String Comparison Operations	
	String Search Operations	5
	String (Cut) Slice Operations	
	String Replace Operations	
	String Conversion Operations	
3	Object-Oriented Programming	
	Concept of Classes and Objects	6
	Classes and Objects - Exercise 1	
	Methods in Java	
	Method Overloading	
	Access Specifiers in Java	7
	Constructor	
	Data Encapsulation	
	Static Keyword	
	Concept of Main Method	
	Classes and Object - Exercise 2	
4	Special Classes in Java	8
	Math Class	
	StringBuilder Class	
	StringBuilder Method	
	Scanner Class	
	Random Class	9
	The Universally Unique Identifier (UUID) Class	
5	What's New in Java 10?	
	Java Development Kit (JDK) 10 Installation	
	"var" Keyword	10
	Concept of Garbage Collector (GC) and Java 10 Update in GC	
	Other Updates in Java 10	

6	Inheritance and Abstraction	
	Class Inheritance	11
	Method Overriding	
	Polymorphism	
	"Super" Keyword	
	Super Class Constructor	
	Protected Access	
	Abstraction	
	Interface	
	"Final" Keyword	
7	Arrays	
	Arrays in Java	
	Array Object	
	Modified/Enhanced "For" loop	
	Array Exercise	
	Two-dimensional (2D) Arrays	
	Two-dimensional (2D) Array Exercise	
	Array of OBJECT	
8	Lists	
	Array List	
	Linked List Structure	
	Linked List	
	ArrayList vs. LinkedList	
	List Iterator	
9	Sets and Maps	
	Hash Set	
	Linked Hash Set	
	Tree Set	
	Iterating over Sets	
	Hash Map	
	Tree Map	
	Iterating on Maps	
10	Regular Expressions	
	Introduction to RegEx (regular expressions)	
	Quantifiers in RegEx (regular expressions)	
	Character Classes in RegEx (regular expressions)	
	Bracket Expressions in RegEx (regular expressions)	
	"OR" Operator	
	"Dot" Operator	
	Greedy and Lazy Matching	
	RegEx (regular expressions) Exercise 1	
	RegEx (regular expressions) Exercise 2	
	Regularizing Number Ranges	
11	Exception Handling	
	What is an Exception?	
	Error vs. Exception	

	Checked and Unchecked Exceptions
	"Throws" Declaration
	Try and Catch Block (Exception Handling)
	"Finally" Block
12	Date and Time Operations (Rev Java 8)
	Local Date and Time
	Customizing Date and Time
	Future and Past Date
	Future and Past Time
	Date Difference
	Time Difference
	Date - Time Formatter
13	Working with Text Files (Apache Commons IO)
	Reading a Text File Using Apache Commons IO
	Editing a Text File Using Apache Commons IO
	Sorting a Line from a Text File
	Copying and Moving Text Files
	Removing Duplicate Words from a Text File
14	Working with MS Excel Files (Apache POI)
	Apache POI Setup
	Reading an MS Excel File using POI
	Reading MS Excel Data into a 2D Array
	Writing MS Excel Data using POI

SQL Database for Beginners	3
Table of Contents	S No
Rational Databases	1
What are Databases?	
What's the Role of Databases in Application Programming?	
Tables and Relations	
Primary and Foreign Keys and Other Constraints	2
SQL Querying	
What is Querying?	
The ANSI SQL Standard	
DML, DDL and More	
Common Query Tools	
Your First Queries	
The SELECT Statement	
Limiting Output Columns	
Formatting and Sorting Output	
Column Aliases	
Filtering Your Results	
The WHERE Clause	
Creating a Filter Condition	
Applying Multiple Filter Conditions	
More Filter Options	
Consolidating Your Data	
Counting Records	
Common Aggregate Functions: SUM, AVG, MIN, MAX	
Do's and Don'ts When Consolidating	
Unions and Other Multiset Consolidations	
Grouping Your Data	
The GROUP BY Clause	
The HAVING Clause	
Do's and Don'ts When Grouping	
Joining Tables	
Table Aliases	
Inner Joins	
Outer Joins	
Self Joins	
Complex Multi Table Joins	3
Subqueries	
Filtering Using Subqueries	
The EXISTS Clause	
Subqueries as Alternative to Joins	
Derived Tables	
Manipulating Your Data	
The INSERT Statement	
The UPDATE Statement	
The DELETE Statement	
Transaction Control	
What are Transactions?	4
Initiating a Transaction	

The COMMIT and ROLLBACK Commands	
Creating Database Objects and Adding Business Logic	
Creating Tables	
Creating and Using Views	
Developing and Calling Stored Procedures	
Implementing Triggers	
	5
	6

Modern Web Design with HTML5, CSS3, and JavaScript

Table of Contents

Introduction to Getting Started with Web Design
Introduction to Front-end Web Design and Development
Learning to Code in HTML
Writing HTML Code
Creating Web Pages with HTML5
Creating Websites Using Modern HTML and HTML5 Coding
Designing your First HTML Page and Resources for HTML
Creating an HTML Template
What are HTML Elements?
Setting Four Headings and Making Text Bold
Applying HTML Tags - Coding Challenge
Text Formats in HTML
Adding Comments in HTML
Making Links with the HTML Anchor Tag
Applying HTML Tags – HTML Exercise
Adding a MailTo Link in HTML.
Adding Images in HTML
Social Profile Linking Exercise
Creating Lists in HTML and Understanding HTML List Options – Unordered List (UL), Ordered List (OL), Definition List (DL)
Adding HTML Tables to your Web Pages Using the Table Tag
Go Back In Time – Coding Challenge
Creating HTML Block and Inline Elements
What are HTML5 Semantic Elements?
Creating a Free Website through GitHub Pages
Creating and Uploading a Resume with HTML
New Form Elements in HTML5 - Explained with Examples
Creating Forms with HTML tags
Learning about Form Field Options with HTML5 Tags
Using the <fieldset> tag
<iframe> Tag in HTML
Adding <audio> and <video> Tags in HTML
HTML Meta Tags and Their Functions
Common Tags with Source Files and Understanding Web Design Tags
Debugging and Commenting on the Code
HTML Challenges
Section Introduction
Setting up a Page for a Website
<viewport> Meta Tag in HTML
Basic Page Structure in HTML
Creating More Page Template
HTML Tables
Adding a Dummy Text and Placeholder Images
Finding Editable Content Using Contenteditable
Dynamic Form Values in HTML5
HTML5 Canvas Drawing with JavaScript
Mobile-first Responsive Design in Cascading Style Sheets (CSS) and Web Design
Introduction to Cascading Style Sheets (CSS) and Applying CSS to Web Pages

What is Cascading Style Sheets (CSS) and How It Works?
Adding Cascading Style Sheets (CSS) to Web Pages and Understanding CSS Syntax
Writing Cascading Style Sheets (CSS) for Designing Modern Web Pages
Adding Comments on Cascading Style Sheets (CSS) Codes
What are Cascading Style Sheets (CSS) Selectors and How to Use them to Get Page Elements?
Cascading Style Sheets (CSS) Color Units
Setting the Background Color in Cascading Style Sheets (CSS) – Coding Challenge
Adding Cascading Style Sheets (CSS) Background Images and Setting Background Properties and Values
Adjusting the Background Image Size and Understanding the Position Options in Cascading Style Sheets (CSS)
Setting Element Height and Width with Cascading Style Sheets (CSS)
Using Chrome DevTools for Web Designing and Web Development
Setting Cascading Style Sheets (CSS) Units and Highlighting Values and Options for CSS Units
Adding and Creating Cascading Style Sheets (CSS) Borders
Applying Margins to Elements on the Web Page with Cascading Style Sheets (CSS)
What is Cascading Style Sheets (CSS) Padding and How to Set Element Padding Values?
What is the Box Model and How it Works in Cascading Style Sheets (CSS)?
Creating Outlines for HTML elements Using Cascading Style Sheets (CSS) Outline Properties
What are Cascading Style Sheets (CSS) Pseudo-classes?
What are Cascading Style Sheets (CSS) Pseudo-elements and How to Write CSS Code for Pseudo-elements?
Adding Font Styles, Selecting Web Fonts, and Updating a Font Family
Adding Google Fonts to Your Website Using Cascading Style Sheets (CSS)
Adding FontAwesome Icons to a Page
Exploring Text and More Font Property Options and Values in Cascading Style Sheets (CSS)
Setting the Value of the Cascading Style Sheets (CSS) Display Property
Making a Navigation Bar Turn the HTML List Items into a Navbar - Coding Challenge
Setting the Value of the Cascading Style Sheets (CSS) Position Property
What is the z-index Cascading Style Sheets (CSS) property and How to Set it in CSS?
Handling the Overflow of the Element Content
Sidebar Nav Website Project
Setting the Cascading Style Sheets (CSS) Float Property
Creating a Website Using the Cascading Style Sheets (CSS) Float Property - Coding Challenge
Creating a Website Image Gallery Using the Cascading Style Sheets (CSS) Float Property - Coding Challenge
Updating the Mouse Cursor Pointer with Cascading Style Sheets (CSS)
Using Cascading Style Sheets (CSS) Advanced Selectors and Understanding More Selection Options
Making a Website Responsive Using Media Queries with Cascading Style Sheets (CSS)
Working of Cascading Style Sheets (CSS) Selector Specificity
Exploring More with Cascading Style Sheet (CSS3) and Creating Webpages Easily
Exploring More Cascading Style Sheet (CSS) and CSS3 to Design Your Website with Styling
Creating the Cascading Style Sheet (CSS) Linear Gradients
Creating the Cascading Style Sheet (CSS) Radial Gradients
Creating Cascading Style Sheet (CSS) 2D Transforms
Learning about Cascading Style Sheet (CSS) 3D Transforms and Applying CSS 3D Transforms
Making Animations with Cascading Style Sheet (CSS)
Cascading Style Sheet (CSS) Layouts FlexBox and CSS Grid
Creating Modern Website Layouts Using the CSS3 Responsive Web Design
CSS FlexBox Layout and Creating a Layout with Flexbox

Creating a Navbar Using Flexbox - Coding Challenge
Applying Element Sizing with Flexbox
Using Flexbox to Size Items on the Page
Creating an Image Gallery Website - Coding Challenge
Creating Websites with a Grid Layout
Using the Cascading Style Sheets (CSS) Grid to Make Rows and Columns
Making the Cascading Style Sheets (CSS) Grid Rows and Columns and Setting the Width
What are Grid Items?
Setting the Cascading Style Sheets (CSS) Grid Area Names
Creating Websites and Setting up and Designing Web Pages Using the CSS Grid - Coding Challenge
Common Cascading Style Sheets (CSS) Questions and Answers for Interview Preparation
Introduction – Common Questions
Exploring More about Cascading Style Sheets (CSS) Questions
Box Model and its Workings
Cascading Style Sheets (CSS) z-index and its Usage
Pseudo-elements in Cascading Style Sheets (CSS) with Examples
Pseudo-classes in Cascading Style Sheets (CSS) with Examples
Box Sizing and Cascading Style Sheets (CSS) Box Model
Cascading Style Sheets (CSS) Font Sizes
Cascading Style Sheets (CSS) Challenges
Cascading Style Sheets (CSS) Challenges – Introduction
Adding Google Font
Changing First Letter in Pseudo-classes
2 Designing Columns Using Cascading Style Sheets (CSS)
Centering Content Using Margin
Hovering Elements in Pseudo-class
Using Hover Anchor in Pseudo-class
Creating Responsive Media Size
Box Model – Exercise
Floating Images to the Left of the Text
JavaScript Introduction
Introduction to JavaScript for Web Design to Make the Pages Interactive
Writing Code with JavaScript
Running JavaScript in a Browser
JavaScript and HTML
Adding Comments in JavaScript
Output Options in JavaScript
JavaScript Code Challenge – Output Action Challenge
Introduction to JavaScript Variables
JavaScript – Let and Const Variables
Exploring Different Types of Data
Creating User Input with a Prompt Code in JavaScript - Coding Challenge
Template Literals in JavaScript using Backticks
JavaScript Code Challenge – Prompt Challenge
Exploring JavaScript Type Conversion and Coercion
Getting the Data Type Using the JavaScript Code - Coding Challenge
What are JavaScript Operators and How to Use Them?
JavaScript Assignment Operators
JavaScript Comparison Operators
JavaScript Truthy and Falsy – Explained

JavaScript If-Else and Else-If Conditional Statements
Learning and Exploring the Code - Coding Challenge
JavaScript Conditional (Ternary) Operator
JavaScript Logical Operators – Example
JavaScript Switch Statement
Creating a Simple Game 'Switch Friends' with JavaScript - Coding Challenge
JavaScript Functions
JavaScript Function Parameters
JavaScript Function Return
JavaScript Function - Expression versus Function Declaration with Examples
Function Scope in JavaScript
JavaScript Function Closures with Examples
JavaScript Function Recursion with Recursion Examples
Using JavaScript Code to Create a Fun Game - Coding Challenge
Immediately Invoked Function Expression (IIFE) JavaScript Function
New Arrow Functions in JavaScript
Creating Objects with JavaScript
Learning More about JavaScript Objects – Part 1
Creating a Car Object Challenge - Coding Challenge
Learning More about JavaScript Objects – Part 2
Creating JavaScript Objects
Creating Arrays to Hold Data with JavaScript
Adding Values within the JavaScript Array
Using the Array Methods in JavaScript – Part 1
Using the Array Methods in JavaScript – Part 2
JavaScript Array Methods – Advanced
Creating JavaScript Loop iterations with JavaScript Code
Getting Contents of an Array with a Loop
Getting the Object Properties and Values with JavaScript to Loop Object Contents
JavaScript Array Map Method - Example Code
Creating Random Values Using JavaScript Math Object
Getting the Current Date Object
JavaScript Document Object Model (DOM)
JavaScript Document Object Model (DOM) Introduction
Introduction to the Dynamic and Interactive Webpage Content
Selecting the Elements of JavaScript Document Object Model (DOM)
Selecting Web Page Elements using JavaScript Element Selectors
JavaScript Document Object Model (DOM) Element Selection Methods - Using Element QuerySelectorAll
Learn about JavaScript Manipulation InnerContent
Updating the Element Attributes Using JavaScript DOM
Setting the Element Attribute Updates Using JavaScript Code
Manipulating Page Elements - JavaScript and Classes
Element Children and Traversing Web Page Elements Using JavaScript
JavaScript Document Object Model (DOM0 - More Traversing of Elements from the Web Page
Updating and Applying the Element Manipulation Styles Using JavaScript
Creating the Page Elements Using JavaScript Code
Page Element Append-Prepend using JavaScript Code - Coding Challenge
Removing an Element from a Webpage Using JavaScript Code
Duplicating the Page Elements Using JavaScript Code

Adding Event Listeners
JavaScript Element Events Bubble and Capturing Event Listeners
Doing Even More with JavaScript Event Listeners
JavaScript Event Listeners for Keyboard Events
Creating Dynamic Shopping List Using the JavaScript List Challenge Events - Coding Challenge
Advanced Coding in JavaScript
Exploring More Advanced Options with JavaScript and Focusing on Dynamic and Interactive Websites
Learning about JavaScript Number Methods
Learning about JavaScript String – Part 1
Learning about JavaScript String Methods - Part 2.
What is JavaScript Math Object?
Getting Random Items from Arrays
Creating a Random Page Background - Coding Challenge
Loading JavaScript once a Page is Loaded
Moving Webpage Elements with JavaScript - Coding Challenge
Writing the Date in JavaScript and Updating the Date Object
Turning Objects into Strings and Strings into Objects using JSON.parse and JSON.stringify.
File Protocol versus HTTP Protocol
What is Local Storage and How to Store Values in the Browser with JavaScript?
Setting up the Code to Run after a Timeout and Interval in JavaScript
Creating JavaScript Prototypes
Making an AJAX Request with JavaScript and Using the JavaScript Fetch() Method
Common JavaScript Questions and Answers for Interview Preparation and Practice
Understanding the window.cancelAnimationFrame() Method and window.requestAnimationFrame() Method
parseInt versus Number Methods
JavaScript Switch Statement
Using Continue and Break-in for loop and While Loop
Keyboard Event Listeners
Creating Page Elements and Adding them Dynamically on the Page
Creating Elements and Building HTML for a Dice Game
Creating a JavaScript Pop-up Modal
Using requestAnimationFrame() Method for Simple Counter
Removing a Child node from JavaScript
Quirks Mode in JavaScript
Before and After Insert Triggers
append() and prepend() Methods
Exploring Rapid Web Design with the Bootstrap 4 Frontend Framework
Introduction to Bootstrap
Getting to Know Bootstrap
Setting up Webpage Using Cascading Style Sheets (CSS) and JS files
Finding out about Bootstrap Versions
What is Grid Bootstrap 4?
Adding Bootstrap Classes and Styling to Your Webpage
Setting up Images within Bootstrap.
Creating an Alert in Bootstrap
Discovering Component Badges in Bootstrap.
Setting up Breadcrumbs Using Bootstrap Components
Colorful Buttons with Bootstrap
Using Cards within Bootstrap

Creating a slideshow with Bootstrap Carousel
Adding and Collapsing Elements Using Bootstrap
Adding a Dropdown Fluxionality in Bootstrap
Setting up Forms in Bootstrap and Field Style
Standing out with the Bootstrap Components JumboTron
Styling HTML Lists with Bootstrap
Creating a Modal Pop-up using Bootstrap
Creating a Responsive Bootstrap Nav Code
Creating Mobile Responsive Navbar Using Bootstrap
Creating Single Page Nav Scroll using Bootstrap Scrollspy
Adding Pagination in Bootstrap
Adding ToolTips and Pop-over in Bootstrap
Adding Spinners and Progress Bars with Bootstrap 4 Styles
Exploring Bootstrap Components
Setting up a Single-page Website from Scratch
Adding a Responsive Bootstrap Navbar
Getting Social Icons with FontAwesome for the Website
Cascading Style Sheets (CSS) Styles for Sections Responsive Website with Bootstrap Styling
Creating a Responsive Website Using Bootstrap Cards
Creating Webpages Columns and Rows Using the Bootstrap Grid
Adding a Slideshow with the Bootstrap Carousel Component
Creating a Custom Bootstrap Contact Form Using Bootstrap Form Styling Classes
Creating Responsive Website Using Bootstrap
Creating a Single-page Website with Scrollspy
Complete Overview of Responsive Website from Scratch
Applying jQuery to Your Web Pages
What is jQuery and How to Write jQuery Code?
Why Use jQuery?
JavaScript Versus jQuery and How to Use jQuery to Write Codes?
What is Document Ready and When to Use it?
Common jQuery Methods and How to Code in jQuery?
jQuery Arrows Methods
Creating New Elements for the Page with jQuery Prepend() and Append() Methods
Inserting Elements in jQuery
Updating and Adding jQuery Attributes
Creating an Element jQuery
Returning Field Values
Removing Elements from the Page with the jQuery Remove() and Empty() Methods
Creating a jQuery Dynamic List - Coding Challenge
Learning More about Code in jQuery.
Setting Images Attributes with jQuery
Checkbox - Coding Challenge
Setting Mouse Events with jQuery
Setting Keyboard Events with jQuery and Adding Event Listeners with jQuery
Adding Event Listeners in jQuery
Setting jQuery Effects – Hide, Show, and Fade
Setting up the jQuery Slide Effect
Using the jQuery Animate Method to Move Elements
Creating Animations - Coding Challenge
What is jQuery AJAX and Making AJAX Request Using jQuery Load() and Get() Methods

Trying AJAX with jQuery - Coding Challenge
Looping through jQuery Objects
Traversing the Document Object Model (DOM) Tree with jQuery
Using Filters to Find Elements with jQuery
Learning more about jQuery with Code Snippets and Examples
Creating a Simple Website from Scratch
Creating a Simple Website from Scratch
Tools and Resources
Creating a Simple Cascading Style Sheets (CSS) Website
Creating a Three-column Website
Creating a Three-column Website Using Flexbox
Creating a Three-column Website Using Cascading Style Sheets (CSS) Grid
Creating an HTML Form Using Cascading Style Sheets (CSS) Grid
Website Review and Conclusion
Creating a Three-column Website from Scratch
Creating a Three-column Design Website from Scratch
Website Planning
Setting up the HTML Structure
Applying Cascading Style Sheets (CSS) to HTML
Setting up Page Content Columns
Creating a Page Footer Using Cascading Style Sheets (CSS)
Creating Responsive Columns Using Cascading Style Sheets (CSS)
Creating a Navbar Maker using Cascading Style Sheets (CSS)
Creating a Responsive Navbar using Cascading Style Sheets (CSS)
Final Code Review Updates.
Creating a Website from Scratch with a Fat Footer Design using the Flex Property
Fat Footer Website Design
Setting up the HTML Code
Website Wireframe
Adding HTML Pages from a Wireframe.
Setting up Cascading Style Sheets (CSS) for a Page
Setting up the Header and Footer Style
Setting Up the Logo and Nav in the Header
Creating Footer Styling using Cascading Style Sheets (CSS)
Adding FontAwesome Social Icons
Adding Copyright to the Footer
Conclusion – Fat Footer Website with the Flex Property
Creating a Cascading Style Sheets (CSS) Grid Website with Flex Navbar
Modern Website Design with Cascading Style Sheets (CSS) Grid Site
Website Planning and Wireframe
Creating an HTML Page Structure
Adding Dummy Content using HTML
Adding a Cascading Style Sheets (CSS) Grid
Mobile-first Responsive Design
Creating a Responsive Navbar
Applying Styling Using Cascading Style Sheets (CSS)
Creating a Header and Footer Using Cascading Style Sheets (CSS)
Adding Color and Font Style
Conclusion – Cascading Style Sheets (CSS) Grid
Creating a Single-page Website with a Sticky Bottom Navbar

Single-page Site with a Sticky Navbar
Setting up HTML for Webpage
HTML Page Structure
Creating a Page Header Using Cascading Style Sheets (CSS)
Creating a Home Section Using Cascading Style Sheets (CSS)
Styling Sections Using Cascading Style Sheets (CSS)
Creating a Web Form
Setting a Page Footer
Creating Sticky Navbar
Making the Website Responsive using Cascading Style Sheets (CSS)

4	Angular Crash Course	5
S No	Table of Contents	S No
1	Introduction	1
	Course and Instructor Introduction	
	How to make the best of this course	
	What are Single Page Applications	2
	What and why Angular	
2	Software Setup	
	Install Angular	
	Install Yarn	
	Install Visual Studio Code	
	Install MySql and MySql workbench	3
	Launch MySql Workbench	
	Download the completed projects	
3	Components	
	Components	
	Create the project	
	Important Project Files and Folders	
	Create the First Component	4
	NgModules	
	Bootstrap and run the first component	
	Using the new component as the root component	
	Create a Seller Component	
	Using Arrays of data and ngFor directive	
	Use the function	
	Input property binding	
	Output Event Binding	
4	Directives	
	Introduction	
	ngIf	
	Using ngIf dynamically	5
	Using ngSwitch	
	Using ngSwitchDefault	
	Using ngFor	
	Using ngFor with objects	6
	Using ngNonBindable	
	NgStyle	
	Dynamic Styling with ngStyle	
	Using NgClass	
	Dynamic NGClass	
5	Services	
	Dependency Injection	
	Usecase	
	Links to rest services	
	Create the project and service	
	Service code walkthrough and imports	
	Implement the service	
	Handle errors in Service	
	Create the component	

	Implement HTML	7
	Implement HTML	
	Update configuration	
	Services in action	
	Add styles	
6	Posting Data	
	Introduction	
	Create the project	
	Implement the Component	
	Implement the Service	
	Implement the HTML	
	Bootstrap the application	
	Run the application	8
7	Using Multiple Services	
	Introduction	
	Create the project	
	Implement the Services	
	Use the Services	
	Implement the HTML	
	Configure the app	
	Run the application	9
	Use forkJoin	
8	REST API Using ExpressJS	
	Introduction	
	Create the Product table	
	Create the Project	
	Create the DB Connection	
	Create a controller	
	Implement the READ endpoint	
	Initialize REST application	
	Test READ	
	Get single Product	10
	Create	
	Test and Troubleshoot Create	
	Update	
	Delete	
9	Create an Angular Client Project	
	Create the project	
	Create and implement Get Products Service method	
	Create the component and view	
	Test GET Products	
	Implement the Other Methods	
	Test Create	
	Test other methods	
10	Routing	11
	Routing	

	Usecase and Refactoring	
	Refactor Components	
	Refactor HTML	
	Routing Steps	
	Create the Routing Module	
	Add the Routes	
	The pathmatch property	
	Configure the routing module	
	Use routes in HTML	
	Routing in Action	
11	Pipes	
	Introduction	
	text pipes	
	date	
	currency	
	json	
	number	
	percent	
	slice	
12	Reactive Forms	12
	Forms	
	Usecase and Project	
	Add bootstrap css	
	Create the model	
	Create the form view	
	Add a Address sub group	
	Add submit button	
	Handle onSubmit	
	Test and Summary	
	Default Values and Validations	
	Handling Validation Errors	
	Get countries dynamically	
13	Template Driven Forms	
	Template Driven Forms	
	Create the project	
	Create the template and form	13
	Add sub FormGroup fields	
	Handle Submit	
	Test	
	Two-way binding	
14	Custom Directives	
	Create a custom structural directive	14
	Implement the conditional logic	
	Use *myIf	
	Create loop directive	
	Create an Attribute Directive	
	Pass Inputs	
	Handle Events	
15	Project Usecase	
	Introduction	

	Flight Reservation Usecase	15
	Flight CheckIn Usecase	
16	Create the Java Backend	
	Create the DB Schema	
	Install Java	
	Install STS	
	Download the executable java application	
	Download the completed source code	16
	Create the project	
	Create the Entities	
	Mark them with JPA Annotations	
	Define relationships	
	Create the Repositories	
	findFlights API	
	saveReservation API	
	Implement saveReservation	
	findReservation	
	updateReservation	
	Configure the Data Source and Run	
	Add Flights	
	Filter Flights	
	Test Filter Flights using Postman	
	Test Save and Find Reservation	
	Test Update	17
	Create and Test FindFlight	
	Add Cross Site Origin Support	
17	Create the Flight Reservation APP	
	Usecase	
	Create the project	
	Create Service	
	Fetch single flight	
	Save reservation	
	Configure Routing	
	Implement Find Flights Component	
	Implement Binding	
	Handle Search	
	Display flight details	
	Bootstrap the application and run	
	Application in action	
	Add Select Button	
	Fetch single flight	
	Render Flight Details	
	Gather passenger details	
	Collect Card Details	
	Handle reservation save	
	Show the confirmation screen	
	Test End to End	
18	Develop Flight CheckIn App	
	Create the project	18

	Create the Service	
	Implement the saveReservation method	
	Implement Routing	
	Code the root component	
	Create Start Checkin HTML	
	Handle OnClick	
	Add Forms Module and assign reservation data	
	Render Flight and passenger details	
	Add noOfBags and confirm button	
	Complete Checkin	

The Complete Node.js Developer Course	6
Table of Contents	S No
Welcome	1
Welcome to the Class!	
Grab the PDF Guide	
Installing and Exploring Node.js	
Section Intro: Installing and Exploring Node.js	
Installing Node.js and Visual Studio Code	
What is Node.js?	
Why Should I Use Node.js?	
Your First Node.js Script	
Node.js Module System (Notes App)	
Section Intro: Node.js Module System	2
Importing Node.js Core Modules	
Importing Your Own Files	
Importing npm Modules	
Printing in Color	
Global npm Modules and nodemon	
File System and Command Line Args (Notes App)	
Section Intro: File System and Command Line Args	
Getting Input from Users	
Argument Parsing with Yargs: Part I	
Argument Parsing with Yargs: Part II	3
Storing Data with JSON	
Adding a Note	
Removing a Note	
ES6 Aside: Arrow Functions	
Refactoring to Use Arrow Functions	
Listing Notes	
Reading a Note	
Debugging Node.js (Notes Apps)	
Section Intro: Debugging Node.js	4
Debugging Node.js	
Error Messages	
Asynchronous Node.js (Weather App)	
Section Intro: Asynchronous Node.js	
Asynchronous Basics	
Call Stack, Callback Queue, and Event Loop	
Making HTTP Requests	
Customizing HTTP Requests	
An HTTP Request Challenge	
Handling Errors	
The Callback Function	
Callback Abstraction	
Callback Abstraction Challenge	
Callback Chaining	
ES6 Aside: Object Property Shorthand and Destructuring	
Destructuring and Property Shorthand Challenge	
Bonus: HTTP Requests Without a Library	

Web Servers	
Section Intro: Web Servers	
Hello Express!	
Serving up HTML and JSON	5
Serving up Static Assets	
Serving up CSS, JS, Images, and More	
Dynamic Pages with Templating	
Customizing the Views Directory	
Advanced Templating	
404 Pages	
Styling the Application: Part I	
Styling the Application: Part II	
Accessing API from Browser	
Section Intro: Accessing API from Browser	
The Query String	
Building a JSON HTTP Endpoint	
ES6 Aside: Default Function Parameters	
Browser HTTP Requests with Fetch	
Creating a Search Form	
Wiring up the User Interface	
Application Deployment (Weather App)	
Section Intro: Application Deployment	
Joining Heroku and GitHub	
Version Control with Git	
Exploring Git	
Integrating Git	
Setting up SSH Keys	
Pushing Code to GitHub	
Deploying Node.js to Heroku	
New Feature Deployment Workflow	
Avoiding Global Modules	
MongoDB and Promises (Task App)	
Section Intro: Databases and Advanced Asynchronous Development	
MongoDB and NoSQL Databases	
Installing MongoDB on macOS and Linux	
Installing MongoDB on Windows	
Installing Database GUI Viewer	
Connecting and Inserting Documents	
Inserting Documents	
The ObjectID	
Querying Documents	
Promises	
Updating Documents	
Deleting Documents	
REST APIs and Mongoose (Task App)	
Section Intro: REST APIs and Mongoose	

Setting up Mongoose
Creating a Mongoose Model
Data Validation and Sanitization: Part I
Data Validation and Sanitization: Part II
Structuring a REST API
Installing Postman
Resource Creation Endpoints: Part I
Resource Creation Endpoints: Part II
Resource Reading Endpoints: Part I
Resource Reading Endpoints: Part II
Promise Chaining
Promise Chaining Challenge
Async/Await
Async/Await: Part II
Integrating Async/Await
Resource Updating Endpoints: Part I
Resource Updating Endpoints: Part II
Resource Deleting Endpoints
Separate Route Files
API Authentication and Security (Task App)
Section Intro: API Authentication and Security
Securely Storing Passwords: Part I
Securely Storing Passwords: Part II
Logging in Users
JSON Web Tokens
Generating Authentication Tokens
Express Middleware
Accepting Authentication Tokens
Advanced Postman
Logging Out
Hiding Private Data
Authenticating User Endpoints
The User/Task Relationship
Authenticating Task Endpoints
The User/Task Relationship
Sorting, Pagination, and Filtering (Task App)
Section Intro: Sorting, Pagination, and Filtering
Working with Timestamps
Filtering Data
Paginating Data
Sorting Data
File Uploads (Task App)
Section Intro: File Uploads
Adding Support for File Uploads
Validating File Uploads
Validation Challenge
Handling Express Errors
Adding Images to User Profile
Serving up Files
Auto-Cropping and Image Formatting

Sending Emails (Task App)
Section Intro: Sending Emails
Exploring SendGrid
Sending Welcome and Cancelation Emails
Environment Variables
Creating a Production MongoDB Database
Heroku Deployment
Testing Node.js (Task App)
Section Intro: Testing Node.js
Jest Testing Framework
Writing Tests and Assertions
Writing Your Own Tests
Testing Asynchronous Code
Testing an Express Application: Part I
Testing an Express Application: Part II
Jest Setup and Teardown
Testing with Authentication
Advanced Assertions
Mocking Libraries
Wrapping up User Tests
Setup Task Test Suite
Testing with Task Data
Section Intro: Testing Node.js
Real-Time Web Applications with Socket.io (Chat App)
Section Intro: Real-Time Web Applications with Socket.io
Creating the Chat App Project
WebSockets
Getting Started with Socket.io
Socket.io Events
Socket.io Events Challenge
Broadcasting Events
Sharing Your Location
Event Acknowledgements
Form and Button States
Rendering Messages
Rendering Location Messages
Working with Time
Timestamps for Location Messages
Styling the Chat App
Join Page
Socket.io Rooms
Storing Users: Part I
Storing Users: Part II
Tracking Users Joining and Leaving
Sending Messages to Rooms
Rendering User List
Automatic Scrolling
Deploying the Chat Application
Wrapping up

Section Intro
New Feature Ideas

MongoDB from Basics to Advanced	7
Table of Contents	S No
MongoDB Overview	1
Introduction Preview	
Knowing your Instructor	
What is MongoDB?	2
Using Cases	
Installing Prerequisites Preview	
Installing MongoDB	
Commands and Queries	
Mongo Shell - Part 1	
Mongo Shell - Part 2	
Adding MongoDB to the Node.js Server	3
Adding MongoDB to your Application	
Local Node.js Server	
Package Manager Preview	
RESTful API	
Creating Express Application	
Setting up Cloud Host for MongoDB	
Connecting Database to your Application Preview	4
Root Setup	
Setting up a Controller	
Data Modelling and Schemas	
Schema Introduction	
Schema Configuration	
Creating a Schema	
Schemas in Action - Part 1	
Schemas in Action - Part 2	
Required Validator	
Custom Validators and Enums	
Default Values	5
Operations	
Basic Query	
Query Properties	
Dynamic Queries	
Semantic Naming Conventions	
Dynamic Inserts	
Inserting Arrays	
Array Query Overview	
Array Query Operator \$all	
Query Operator \$in	
Array Query Operator \$in	6
Array Query Operator \$nin	
Query Operators \$lt and \$gt	
Updating a Single Array Member	
UpdateMany() Array Method	7
UpdateOne()Method	
Array \$push and \$pull Methods	
Dynamic Update	

Dynamic Delete	
Adding New Collections	
Embedded Documents	
Advanced Usage	
Sharding and Replicas	
Indexing	8
Unit Testing	
Pagination	
	9
	10
	11

NodeJs, Express and Mongo Dev to Deployment	8
Table of Contents	S No
Course Introduction	1
Welcome To the Course	
Project Files & Questions	
Setting Up	
Dev Environment Setup	
What Exactly Is Node.js?	
Installing & Exploring Node.js	
Install MongoDB Locally	2
Sign Up For mLab	
Create a Heroku Account	
VidJot Project Start & Express Fundamentals	
VidJot Project Introduction	
Install & Initialize Express	
Basic Routing & Nodemon	3
Express Middleware	
Working with Templates	
Bootstrap & Partials	
Mongoose & Local MongoDB	
Install Mongoose & Connect	
Create the Idea Model	
Add Idea Form	4
Server Side Form Validation	
Saving Idea to MongoDB	
Fetching Ideas from MongoDB	5
Edit Idea Form	
Update Idea Data	
Remove Idea Data	
Flash Messaging	
Local Authentication with Passport	
A Look at Passport	
The Express Router	6
Login & Register Pages	
Register Form Validation	
User Registration	
Hooking Up a Local Strategy	
Finishing the Login Functionality	
Logout Function	
Protecting Routes	
Access Control	
VidJot Prep & Deployment	
Preparing Our App for Deployment	
Deploying To Heroku	
Adding a Domain Name	
StoryBooks Project Start & Google OAuth	
StoryBooks App Introduction	
Initial Setup & Heroku Push	
Creating Our Google OAuth Credentials	

Creating Our Google Strategy
Auth Callback & Remote App
Creating the User Model
Saving the Authenticated User
Adding Session & Authentication
Creating Our UI
Index Routes & Handlebars
Header & Navbar
Side Navigation
Dashboard & Stories Routes
Add Button & Footer
Restricting Routes
Add Story Form
Stories & the Database
Create the Story Model
Save Story to MongoDB
Fetch & Display Public Stories
Handlebars Helpers
Show Template & Format Dates
Creating the Dashboard
Edit Form & Select Helper
Updating Stories
Deleting Stories
Comments, Access Control & Cleanup
Add Comment Functionality
Listing Comments
Edit Access Control
Get Stories from Specific Users
Block Private Story Details
StoryBooks Prep & Deployment
Prep & Production Key Variables
Deploy & Test
Domain & Update Google OAuth Creds

Building Web Services with Java Network Programming	9
Table of Contents	S No
Servlet Fundamentals	1
The Course Overview	
Echo Servlet	2
Handling Parameters	
Cookie Handling in Servlet	
Creating HTTP Server Response	
Setting Response Headers	
Advanced Servlet Programming	
Servlet Filters and Authentication	3
Session Handling	
Servlet Lifecycle	
File Uploading	
Supporting WebSocket	
HTTP/2.0 Programming in Java	
Intro to HTTP/2.0	
Supporting HTTP/2.0	
Debugging Servlet Applications	
Http Client Programming in Java 9	
Asynchronous Client	4
Client Configuration	
Advanced Java Web Programming	
Spring Web Programming	
Web Service Programming	
Network Security	
Security	
Encryption Basics	
Creating a Keystore	
Symmetric Encryption Client/Server	
Asymmetric Encryption Client/Server	
Network Interoperability	5
Network Elements	
Byte Order in Java	
Interfacing with Other Languages	
Debugging Network Programs	
	6
